Summary

Computer Science graduate and React Native Developer with 2+ years of experience in mobile application development. Skilled in building responsive, production-focused applications using React Native, TypeScript, JavaScript, Redux Toolkit, REST APIs, GraphQL, and real-time communication technologies. Experienced in healthcare, professional networking, marketplace, and fitness applications, with hands-on expertise in WebRTC, Socket.IO, Node.js, PostgreSQL, Firebase, and authentication systems. Published research work in ECG arrhythmia classification using self-supervised learning and explainable AI techniques. Strong focus on clean UI, performance optimization, scalable architecture, and delivering reliable cross-platform mobile experiences.

Academic Profile

2021–2025	BS Computer Science	Bahria University Lahore
-----------	---------------------	--------------------------

Publication

Electrocardiogram (ECG) Arrhythmia Classification — March 2026

DOI: <https://doi.org/10.3390/technologies14030148>

- Developed a self-supervised ECG representation learning framework using contrastive pretraining and a hybrid ensemble of convolutional and tree-based models for multiclass arrhythmia classification.
- Evaluated the framework using patient-level cross-validation and independent ECG cohorts including PTB-XL, Chapman–Shaoxing, and INCART.
- Achieved macro-F1 scores of 0.91–0.94 on external datasets, demonstrating robust performance across heterogeneous patient populations and recording configurations.
- Applied SHAP and Grad-CAM to support model interpretability.

Work Experience

July 2026 – Present	Wateen Telecom, Lahore
---------------------	-------------------------------

- Develop and maintain responsive cross-platform mobile application features using React Native.
- Build reusable UI components and responsive screens while following established application design patterns.

- Integrate REST APIs and handle asynchronous data operations for mobile application workflows.
- Implement and manage application state using modern React Native state-management practices
- Optimize mobile application performance, navigation, loading behavior, and overall user experience.
- Collaborate with development and design teams using Git & GitHub to deliver and maintain application

Jan 2026 – Apr 2026

Cipher Developers, Lahore

- Built "Dentment," a LinkedIn-clone mobile app with authentication, dynamic feed, and connection network.
- Implemented multi-type posts (Polls, Case Studies, Image/Video, Celebrations) with real-time engagement.
- Integrated NestJS GraphQL APIs using Apollo Client for data fetching, caching, and state management.
- Developed mentor booking system with session requests, accept/reject functionality, and push notifications.
- Styled responsive UI using NativeWind (Tailwind CSS) for pixel-perfect cross-device alignment.
- Optimized performance via memorization and lazy loading, reducing screen load times.
- Collaborated with content teams to edit and produce internal training videos and product demo clips, ensuring visual consistency and timely delivery.
- Used Figma to design storyboards and motion graphics concepts for video projects.
- Managed version control and collaboration using Git & GitHub.

Nov 2024 – Dec 2025

AppsHipe, Gulberg III Lahore

- Implemented Firebase authentication, Firestore, and real-time features.
- Built modular UI screens with responsive layouts.
- Used Redux Toolkit for state management.
- Integrated real-time tracking and maps-based features.
- Optimized performance & improved loading time.
- Collaborated via Git & GitHub for version control.
- Integrated REST APIs and handled async operations.
- Produced and edited short promotional videos and UI walkthroughs using Adobe Premiere Pro and Canva for client presentations.
- Applied color correction, transitions, and sound mixing to enhance video quality and brand alignment.

Projects

ConnectApp – Healthcare Communication Platform (2026)

- React Native | TypeScript | Node.js | Express.js | PostgreSQL | Socket.IO | WebRTC | JWT
- Built a role-based healthcare communication platform for Patients and Doctors.
- Implemented appointment booking, doctor consultation management, real-time chat, and call history.
- Integrated Socket.IO for real-time messaging and WebRTC for audio/video calls.
- Implemented JWT authentication, role-based access, and push notifications.
- Developed responsive mobile interfaces and a Node.js/Express backend with PostgreSQL for healthcare communication workflows.

Dentment – Professional Networking App (2026)

- *React Native | TypeScript | Apollo Client | GraphQL | NestJS | NativeWind*
- Built LinkedIn-style mobile app with user profiles, feed, and connection network.
- Engineered 5 post types (Text, Image/Video, Poll, Case Study, Celebration) with real-time voting.
- Developed mentor booking module with listings, calendar, requests, and accept/reject workflow.
- Integrated GraphQL APIs with optimistic UI updates for likes, comments, and follows.
- Implemented secure authentication with protected routes and session management.
- Delivered responsive UI using NativeWind matching web version specs.

LCI-LMS Portal (2025)

- Designed the complete end-to-end UI/UX of the client's LMS portal mobile app, covering every screen with no section left incomplete.
- Created a modern, fully responsive layout, ensuring perfect alignment and consistent UI on all device sizes.
- Built an interactive login screen with hidden password toggle, smooth navigation flow, and user-friendly interface.
- Delivered a polished design system including typography, spacing, components, and color themes to maintain brand consistency.

MarketPlacer App (2025)

- Marketplace for buying/selling.
- Firebase Email/Password authentication.
- Posting & saving ads through firebase.
- Push Notifications through firebase by giving token id.
- Real-time chat using Firebase.
- Handle mobile contacts through Redux.

FYP – Diabetic Foot Ulcer Prediction (2024)

- Implemented a Python-based AI model to analyse and classify diabetic foot ulcer images using advanced deep learning techniques.
- Pre-processed the dataset by applying: Normalization, Resizing, Data Augmentation
- SMOTE for class balancing
- Used EfficientNetB0 for classification and feature extraction to achieve high accuracy.
- Deployed the model in a Flutter-based mobile application to assist healthcare providers with real-time detection.

Skills

Mobile Development

- React Native
- Flutter
- Clean Design & Performance Optimization

State Management

- Redux Toolkit
- API Integration & Async Operations

Backend & Database

- Firebase (Auth, Firestore Database, Storage, Push Notification)
- WebRTC

Tools & Technologies

- VS Code
- Git & GitHub
- Figma (UI/UX)

Languages

- | | | |
|--------------|----------------|----------|
| • JavaScript | • React Native | • Python |
| • C / C++ | • JSX/TSX | |

Area of Interest

- Mobile App Development
- QA Manual & Automation Testing
- Data Science & Artificial Intelligence
